

HILLARY CHUKWUMA PRINCE

Backend Engineer · Full-Stack Developer

Port Harcourt, Nigeria | princehillary813@gmail.com | LinkedIn: chukwuma-hillary-318b09337 | GitHub: Hillary3000-web

PROFESSIONAL SUMMARY

Backend-focused full-stack developer with hands-on production experience building scalable APIs, real-time systems, and AI-integrated platforms. Proficient in Django, NestJS, PostgreSQL, Redis, and WebSockets, with active AI integration work using Groq/Llama models. ALX Backend Engineering Program graduate and active contractor. B.Tech Computer Science undergraduate (CGPA 3.83/5.0) at FUTO, pursuing remote backend and full-stack engineering roles.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frameworks: Django, Django REST Framework, NestJS, React.js, Tailwind CSS

Databases & Storage: PostgreSQL, Supabase, Firestore, Redis

Backend & DevOps: Celery, WebSockets / Django Channels, RESTful APIs, OAuth2, JWT, Git/GitHub, GitHub Actions, Linux CLI

Cloud & Deployment: Render, Vercel, GCP (Firestore/Cloud Services)

AI & Integrations: Groq API, Llama 3.3 70B, Interswitch Payment API, Postman, VS Code

PROFESSIONAL EXPERIENCE

Backend Developer (Contractor) — Nexusbotix

Remote | March 2026 – Present

- Architected and implemented the Channels module from scratch using NestJS and Firestore, enabling real-time messaging infrastructure.
- Diagnosed and resolved a critical undefined field bug in Firestore document handling that was blocking channel creation.
- Managed Git workflows including merge conflict resolution and feature branch delivery (feature/channels-implementation).
- Collaborated asynchronously with a distributed team across backend and frontend boundaries.

Frontend Developer (Contract) — Remote Client (React Tasks)

Remote | February 2026

- Built a PDF Document Editor with drag-and-drop field placement, improving document workflow UX.
- Refactored shared state architecture using a FlowContext pattern, reducing prop drilling across components.
- Developed a Video Dashboard with drag-and-drop column reordering using React DnD.

Web Development Intern (SIWES) — Industrial Training Programme

Owerri, Nigeria | October 2024

- Built and deployed web solutions for internal stakeholders using Django and React.
- Debugged frontend issues, optimised page performance, and applied security best practices.

KEY PROJECTS

FlowState — AI-Powered Productivity Platform *flow-state-liart.vercel.app*

Tech: Django, Django Channels, Celery, Redis, PostgreSQL, Supabase, Groq/Llama 3.3 70B, React 19, Zustand

- Built a real-time collaborative productivity platform with WebSocket-driven live updates via Django Channels.
- Integrated Groq/Llama 3.3 70B for AI-powered task suggestions and productivity insights.
- Implemented async task queuing with Celery and Redis for background job processing.
- Deployed full-stack application with React 19 frontend and Supabase-backed persistence.

MediRemit — Cross-Border Healthcare Payment Platform *mediremit-frontend.vercel.app*

Tech: Node.js / Express, PostgreSQL, Supabase, Interswitch Payment API, React/Vite | Interswitch × Enyata Buildathon

- Built solo as backend lead — a cross-border medical payment platform for Nigerian diaspora to pay Nigerian hospitals.
- Implemented OAuth2 auth flows, Interswitch sandbox payment integration, and webhook handling.
- Designed multi-currency transaction schema in PostgreSQL; deployed backend on Render, frontend on Vercel.

Sentiment Analysis System — CSC309 AI Project *sentiment-analysis-g0cf.onrender.com*

Tech: Python, NLP, Machine Learning, Flask/Django

- Built and deployed an NLP-based sentiment analysis system that classifies text as positive, negative, or neutral.
- Trained classification model on labelled datasets; integrated REST API for real-time sentiment inference.
- Deployed live on Render; promoted publicly as part of Q2 build-in-public initiative.

UniHub — Student Results Management Portal

Tech: Django REST Framework, React/Vite, PostgreSQL, JWT Auth

- Built a full-stack student portal with custom user model, role-based access (Student/Advisor), and JWT authentication.
- Implemented Excel upload for bulk result entry with CGPA auto-calculation using Nigerian grading scale.
- Developed Resource Hub and Announcements system for faculty-student communication.

Sudoku Solver

Tech: Django, OpenCV, Tesseract OCR

- Built a computer-vision pipeline that extracts a Sudoku grid from a photo and solves it using a backtracking algorithm.

EDUCATION

B.Tech. Computer Science (In View) — CGPA: 3.83 / 5.00

Federal University of Technology, Owerri (FUTO) | 300 Level | 2022 – Present

Relevant Coursework: Web Technologies, Software Engineering, Database Management, Data Structures, Computer Networking, AI & Machine Learning.

ALX Backend Engineering Program — ALX Africa

Remote | Graduated March 2026

LEADERSHIP

Secretary General — ASICTS, FUTO

Owerri, Nigeria | April 2026 – Present

- Elected Secretary General of the faculty's student association (Association of ICT Students).
- Driving transparency and tech-focused initiatives including inter-departmental hackathons and coding workshops.
- Serve as official record-keeper and communication liaison for the executive council.

Director of Welfare — ASICTS, FUTO

Owerri, Nigeria | September 2025 – April 2026

- Served as the primary liaison between the student body and faculty on welfare matters.
- Organised large-scale student events and coordinated cross-departmental logistics.
